

Finally, Insurance and Healthcare speak the same language.

1 CLOUD BASED ECOSYSTEM

Controls and facilitates the communication and exchange of credentialing data, verification, locations and office hours between the members, providers, health plans and other licensed providers or entities.

2 DATA VISUALIZATION

Payers can view data discrepancy, track real-time statistics, notifications and more so that insurers can access the information they need at a moment's notice.

3 EASY DATA MANAGEMENT

Providers can manage their credentialing and demographic updates within the hub and to other payers or providers outside the ecosystem depending on the network contracting model.

4 CREDENTIAL MANAGEMENT

Real time credentialing automation for tracking sanctions and licensing with automated primary source verification to the source (PSV),

5 MULTI-NETWORK MANAGEMENT

Advanced data management tools, mass communication capabilities, office location, hours of operation management and network management administration.

6 LIVE DIRECTORY

Geo-access driven member friendly on-line provider location services complimented with a user designed CMS compliant provider directory and network management solution.

Because good Healthcare should be simple.
